

PROFESSIONAL PROGRAMME PROPOSAL

AGENT XCELERATOR

Five-Month AI Course & Project Internship

Learn. Build. Automate. Deploy.

TOTAL DURATION 5 Months	COURSE PHASE 3 Months	INTERNSHIP PHASE 2 Months
CLASS TIME 5:30 PM–7:30 PM	CLASS DAYS Monday–Friday	START DATE 1st October 2026

Programme Investment: ₹25,000
Registration: ₹5,000 | First instalment: ₹10,000 | Second instalment: ₹10,000

Cohort & Learning Format
Maximum 25 admissions | 2 hours daily | 30% theory • 70% practical learning

VENUE

Gayatri Innovation Center

Plot No. 52, Mahaveerapuram, Chopasni Road, Jodhpur

Programme Contact

Proposal Date: 09 September 2026

1. Programme Overview

Agent Xcelerator is a five-month, cohort-based learning programme designed to move learners from AI fundamentals to the practical development and presentation of real AI-enabled solutions. The journey combines a three-month structured AI course with a two-month supervised project internship.

The programme starts on 1st October 2026, with classes from Monday to Friday, 5:30 PM to 7:30 PM. It follows a 30% theory and 70% practical learning model. Learners work through guided labs, business and community use cases, mini-projects, agentic workflows, a capstone build and internship documentation. The small cohort size of up to 25 participants enables closer mentoring and structured reviews.

Programme Promise

Participants will not only study AI concepts—they will build, test, document and demonstrate AI-enabled solutions under human supervision.

2. Programme Objectives

- ◆ Build a clear foundation in artificial intelligence, data, machine learning and generative AI.
- ◆ Develop practical skills in prompting, data analysis, workflow automation and AI application building.
- ◆ Introduce agentic AI: goals, planning, tool use, memory, retrieval, guardrails and human approval.
- ◆ Enable learners to design responsible solutions for education, business, operations, marketing, finance and social impact.
- ◆ Develop a demonstrable portfolio through labs, mini-projects, a capstone and a two-month project internship.
- ◆ Strengthen communication, documentation, teamwork, problem-solving and employability skills.

3. Five-Month Learning Architecture

Phase	Duration	Focus	Primary Outputs	Delivery
Phase I: AI Course	Months 1–3	12 structured modules	Labs, mini-projects, portfolio and capstone prototype	Monday–Friday, 5:30 PM–7:30 PM
Phase II: Project Internship	Months 4–5	Applied problem-solving and implementation	Working prototype, documentation, review presentation and internship report	Mentored project work, reviews and demonstrations

4. Three-Month AI Course — 12 Modules

Module	Key Learning	Practical Output
01 AI Foundations & Model Exploration	AI fundamentals, responsible use, model comparison and prompt basics using ChatGPT, Claude, arena Qwen AI and CChat.	Comparative AI task lab, prompt journal and responsible-use checklist.
02 Prompt Engineering, Quality & Voice Workflows	Structured prompting, role/context design, evaluation, iteration and voice-first productivity using ChatGPT, Claude, Quality AI and Wispr Flow.	Tested prompt library and voice-to-workflow productivity assistant.
03 AI Research, Knowledge & Notebook Intelligence	Source discovery, document interrogation, note synthesis, citation habits and notebook workflows using AntiGravity Notebook LM, Supita notebook and Google Pick.	Source-grounded research brief and reusable knowledge notebook.
04 Creative AI for Visual, Video & Communication	Visual ideation, image generation, storyboard design, communication assets and creative review using Leonardo AI, Google Flow and Omily.	Campaign concept pack with visual assets and a short storyboard.
05 AI-Assisted UI/UX & Product Prototyping	User flows, wireframes, interface generation, responsive design and prototype critique using Stitch, V0 Code and Lovable.	Clickable interface prototype backed by a user-flow document.
06 Rapid AI Application Development	From idea to functional app: forms, logic, data interaction, iteration and demos using Bolt, Lovable and Streamlit.	Working minimum viable AI application with user instructions.
07 AI Coding & Developer Workflows	Code generation, explanation, debugging, refactoring, version-aware review and documentation using Claude Code, Codex and V0 Code.	Tested application feature, technical README and review checklist.
08 Agentic AI Foundations & Personal Agents	Goals, plans, tool use, memory, task execution, permissions and human approval using Harmless Agent and OpenClaw.	Single-agent prototype with explicit tools, guardrails and approval points.
09 Workflow Automation & Multi-Agent Orchestration	Triggers, actions, webhooks, branching, hand-offs, monitoring and failure recovery using N8N, Harmless Agent, OpenClaw and CChat.	Automated multi-step workflow with logs and escalation rules.
10 Data, Backend & AI Dashboards	Database design, authentication concepts, data storage, retrieval and decision dashboards using Supabase, MongoDB and Streamlit.	Data-backed dashboard or application with role-aware workflow.
11 Immersive Web & Production Deployment	Interactive 3D experiences with three.js plus deployment, environment configuration and release checks using Netlify and Vercel.	Published interactive web experience with deployment checklist.
12 Integrated Capstone, Safety & Career Portfolio	Select and integrate appropriate tools from the programme stack; test usability, privacy, reliability and human oversight; document and pitch the solution.	Deployed capstone, demonstration, project report and portfolio case study.

Programme Tool Stack

The following tool names are retained exactly as supplied for the programme. Individual tools will be introduced in the relevant modules and selected according to the learning task, account availability, licensing, safety and technical suitability.

Hermes Agent	OpenClaw	ChatGPT
N8N	Claude	Quadratic AI
Streamlit	Stitch	Antigravity
Loveables	Netlify	Vercel
Supabase	Google pic	Google Flow
Wispr Flow	Pomelli	Leonardo AI
Bolt	Zchat	Claude Code
Codex	V0	Notebook LM
Jupyter Notebook	MongoDB	Arena
Qwen AI	Three.js	

5. Practical Learning Model

The stated 30:70 ratio applies to the complete three-month course phase. Theory is delivered in short concept blocks and immediately converted into guided practice, independent builds, reviews and demonstrations.

Component	Share	Examples
Concept learning	30%	Core concepts, demonstrations, case discussions, ethics and safety.
Practical learning	70%	Labs, datasets, prompts, automations, prototypes, debugging, peer review and project demonstrations.

6. Two-Month Project Internship

The internship is structured as a supervised project experience. Learners may work individually or in approved teams on an assigned or approved problem statement. The internship does not, by itself, constitute an employment offer, and no stipend is included or guaranteed unless separately communicated in writing.

Month 4 — Discovery & Prototype

Orientation; problem selection; user/stakeholder discovery; success metrics; data and privacy plan; solution architecture; prototype sprint; mentor review.

Month 5 — Build, Test & Demonstrate

Feature build; agent/workflow integration; testing and error analysis; human-oversight checks; documentation; final deployment/demo; viva and internship report.

Expected Internship Deliverables

- ◆ Approved problem statement and project charter.
- ◆ Working prototype or validated automation workflow.
- ◆ Test cases, limitations and responsible-AI risk register.
- ◆ User guide, technical documentation and project report.
- ◆ Final demonstration, presentation and viva.

7. Suggested Capstone Domains

- ◆ AI-powered student or institutional knowledge assistant with source citations.
- ◆ MSME sales, inventory, customer-support or reporting workflow automation.
- ◆ Marketing research and content-operations assistant with human approval.
- ◆ Finance-document classification, expense insight or management dashboard prototype.
- ◆ HR screening-support or employee FAQ assistant with fairness and privacy controls.
- ◆ Community, accessibility, agriculture, tourism or local-language information solution.

8. Assessment & Completion Framework

Assessment Component	Weight	Evidence
Module labs and assignments	25%	Completed exercises and lab records
Mini-projects	20%	Functional outputs and demonstrations
Capstone prototype	25%	Solution quality, testing and presentation
Internship project and report	20%	Build, documentation, mentor review and viva
Professional practice	10%	Attendance, teamwork, communication and responsible conduct

Recommended completion standard: at least 80% attendance, submission of required work, adherence to the code of conduct, and successful completion of the capstone and internship review. Course-completion and internship credentials may be issued separately, subject to these requirements.

9. Eligibility Criteria

- ◆ Open to motivated students, recent graduates and early-career learners seeking practical AI capability.
- ◆ Minimum academic eligibility: Class 12 passed or currently enrolled in an undergraduate/postgraduate programme. Applicants below this threshold may be considered only through a separate aptitude review.
- ◆ Basic computer literacy and ability to work with web applications and office productivity tools.
- ◆ No prior coding or AI experience is mandatory; willingness to practise consistently is essential.
- ◆ Access to a laptop suitable for classroom labs is strongly recommended. Any software or hardware prerequisites will be communicated before enrolment.
- ◆ Admission is subject to application screening, counselling/aptitude interaction, seat availability and acceptance of programme policies.

10. Schedule, Cohort & Venue

Programme duration	5 months: 3-month AI course + 2-month project internship
Programme start date	1st October 2026
Class days	Monday to Friday
Class timing	5:30 PM to 7:30 PM
Class duration	2 hours daily
Detailed calendar	Batch start date, weekly timetable, holidays and review dates will be communicated separately
Maximum admissions	25 participants only
Venue	Gayatri Innovation Center, Plot No. 52, Mahaveerpuram, Chopasni Road, Jodhpur

11. Programme Fee & Payment Plan

Total Programme Fee: ₹25,000 per participant
The registration amount forms part of the total programme fee; it is not an additional charge.

Payment Stage	Amount	Payment Timing
Registration fee	₹5,000	At admission/seat confirmation
First instalment	₹10,000	As per the admission schedule
Second instalment	₹10,000	As per the admission schedule

Payment Stage	Amount	Payment Timing
Total	₹25,000	Complete programme fee

The exact due dates, refund/cancellation terms, taxes (if applicable), transfer policy and late-payment rules must be communicated in the signed admission form or fee policy before payment. A seat is confirmed only after fulfilment of the stated admission requirements and receipt of the applicable registration amount.

12. Resources, Responsibilities & Safe Use

SIN School of AI

- ◆ Provide curriculum delivery, labs, project briefs, mentoring and structured reviews.
- ◆ Provide assessment rubrics, project guidance and completion records.
- ◆ Use reasonable safeguards for learner data and require human review for consequential AI outputs.
- ◆ Communicate the detailed timetable, required tools and programme policies before commencement.

Participant

- ◆ Attend sessions regularly and complete assigned practical work.
- ◆ Arrange reliable access to the required laptop, internet and accounts communicated for labs.
- ◆ Use lawful datasets and respect privacy, copyright, confidentiality and institutional policies.
- ◆ Disclose AI assistance in submitted work and never treat AI output as automatically accurate.

Technology & Cost Note

The programme may use a combination of free, open-source, local and cloud-based tools. Premium API credits, paid software licences, specialised hardware, travel or external certification examination charges are not implied as included unless listed separately in writing. Tool selection may change to maintain safety, relevance, availability and learning outcomes.

13. Admission Process

- 1 Submit the programme enquiry/application.
- 2 Complete counselling and, where required, a basic aptitude interaction.
- 3 Review eligibility, timetable, fee policy and learner requirements.
- 4 Pay the ₹5,000 registration fee to confirm admission, subject to seat availability.
- 5 Complete onboarding and begin the three-month course phase.

Limited Cohort

Admissions are capped at 25 participants to support practical delivery, mentoring and project reviews.

15. Closing Note

Agent Xcelerator is designed as a focused transition from AI awareness to demonstrable capability. Through a structured course, practical labs, responsible agentic workflows and a mentored internship, learners build the confidence and evidence needed to present themselves as thoughtful AI practitioners—not merely tool users.
